

Triple-A: Enhancing at an Early Stage the Investment Value Chain of Energy Efficiency Projects is an EU-funded research project under the Horizon 2020 programme, aiming to **assist financial institutions** increase their deployment of capital in energy efficiency, **making investments more transparent**.

Briefing note on energy transition in buildings

The transition to a forward-looking climate neutral economy, announced in the **European Green Deal**, demands an action plan where public and private sector investments are channeled towards climate-friendly technologies and business models.

To support this transition, **Triple-A**, together with 6 H2020 projects – **SENSEI, LAUNCH, AmBIENCE, NOVICE, QUEST and U-CERT** - have drafted **recommendations** in a letter to **policy makers**, based on all projects' findings and objectives, investigating ways to enable the mass **adoption of energy efficiency measures** and **smart technologies** supporting the uptake of more **renewable energy sources**.

This is being done through the development of **tools** and **methodologies** that include **enabling** ESCOs to develop demand response functionalities, **improving** and standardizing measurement and verification methods, **de-risking** and **attracting** private investments, **creating** new business models and **expanding** markets, as well as **transforming** energy efficiency and demand response into energy resources for TSOs and DSOs.

The policy recommendations are gathered under 4 generic themes:

- electricity market reform,
- financing methods,
- technical streamlining and
- energy performance certification.

They are derived through an in-depth understanding of the social, technical, economic, and environmental dimensions of the **energy transition**, as viewed from the academic, business and policy perspectives of the contributing projects, all funded by the Horizon 2020 programme.
